- Scrapping wiki page using BeautifulSoup4 library for Toronto post codes
- Foursquare API to get the venues
- Adjust column names
- Remove unnecessary data
- Display city maps with Folium

Analysis

- Get the most common categories (5) for each neighborhood
- Display the most common categories for each city
- Use K-means to define the clusters (5) for each city

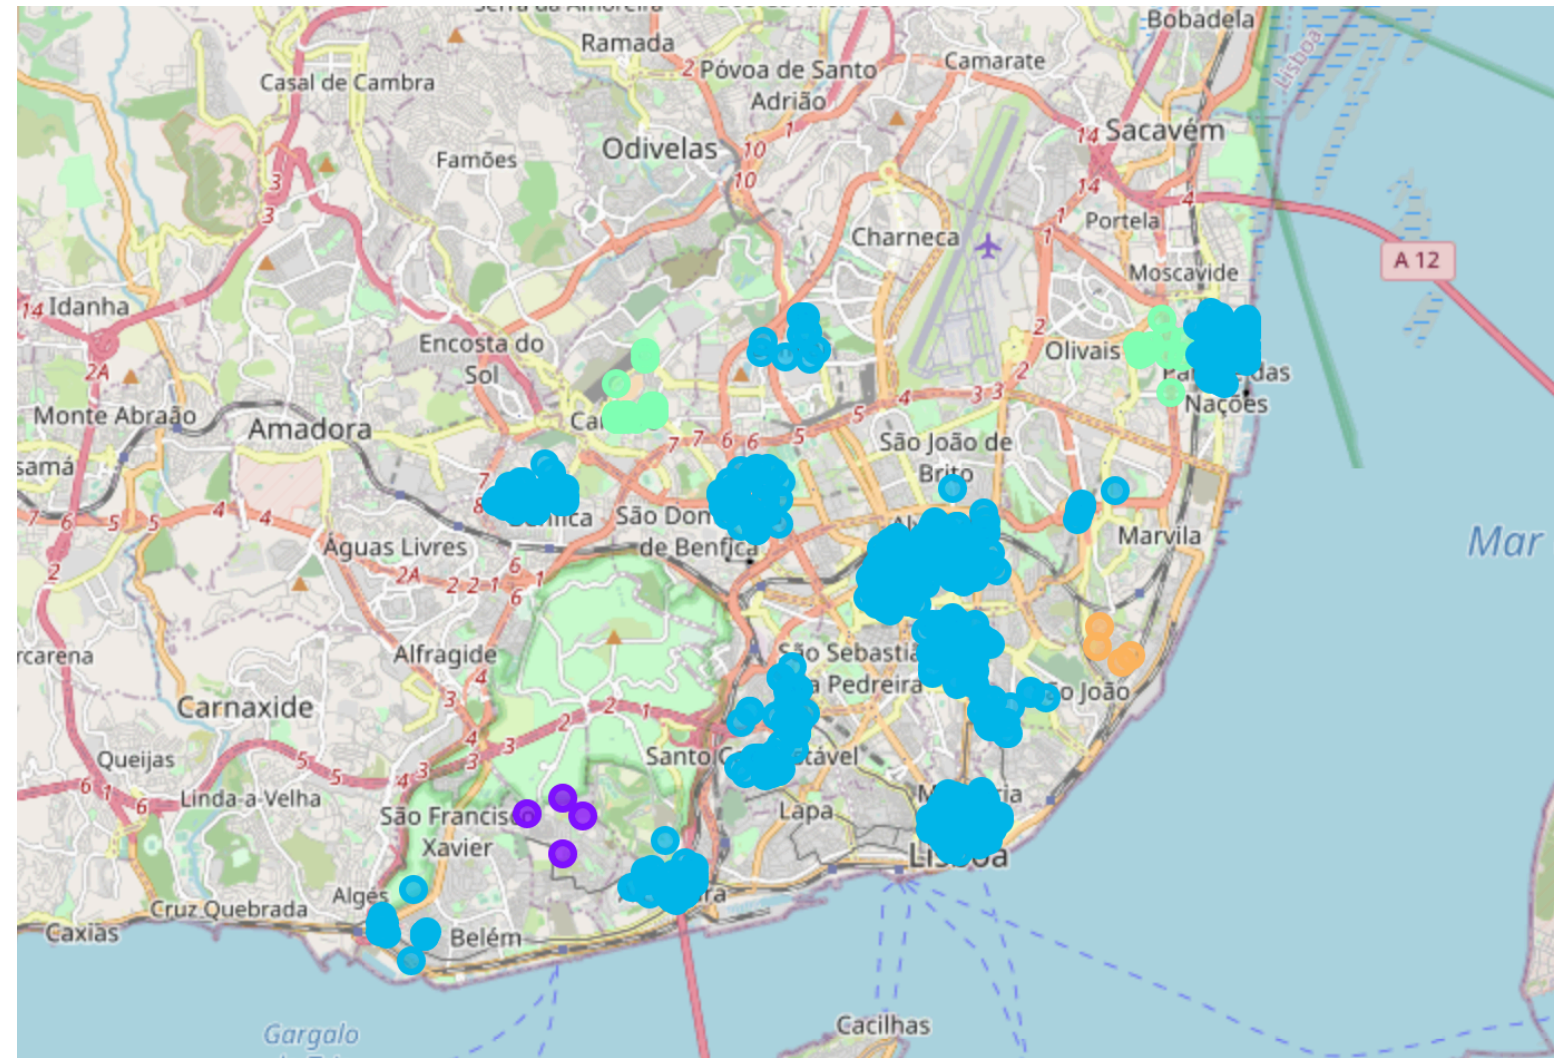

Lisbon Category Plot

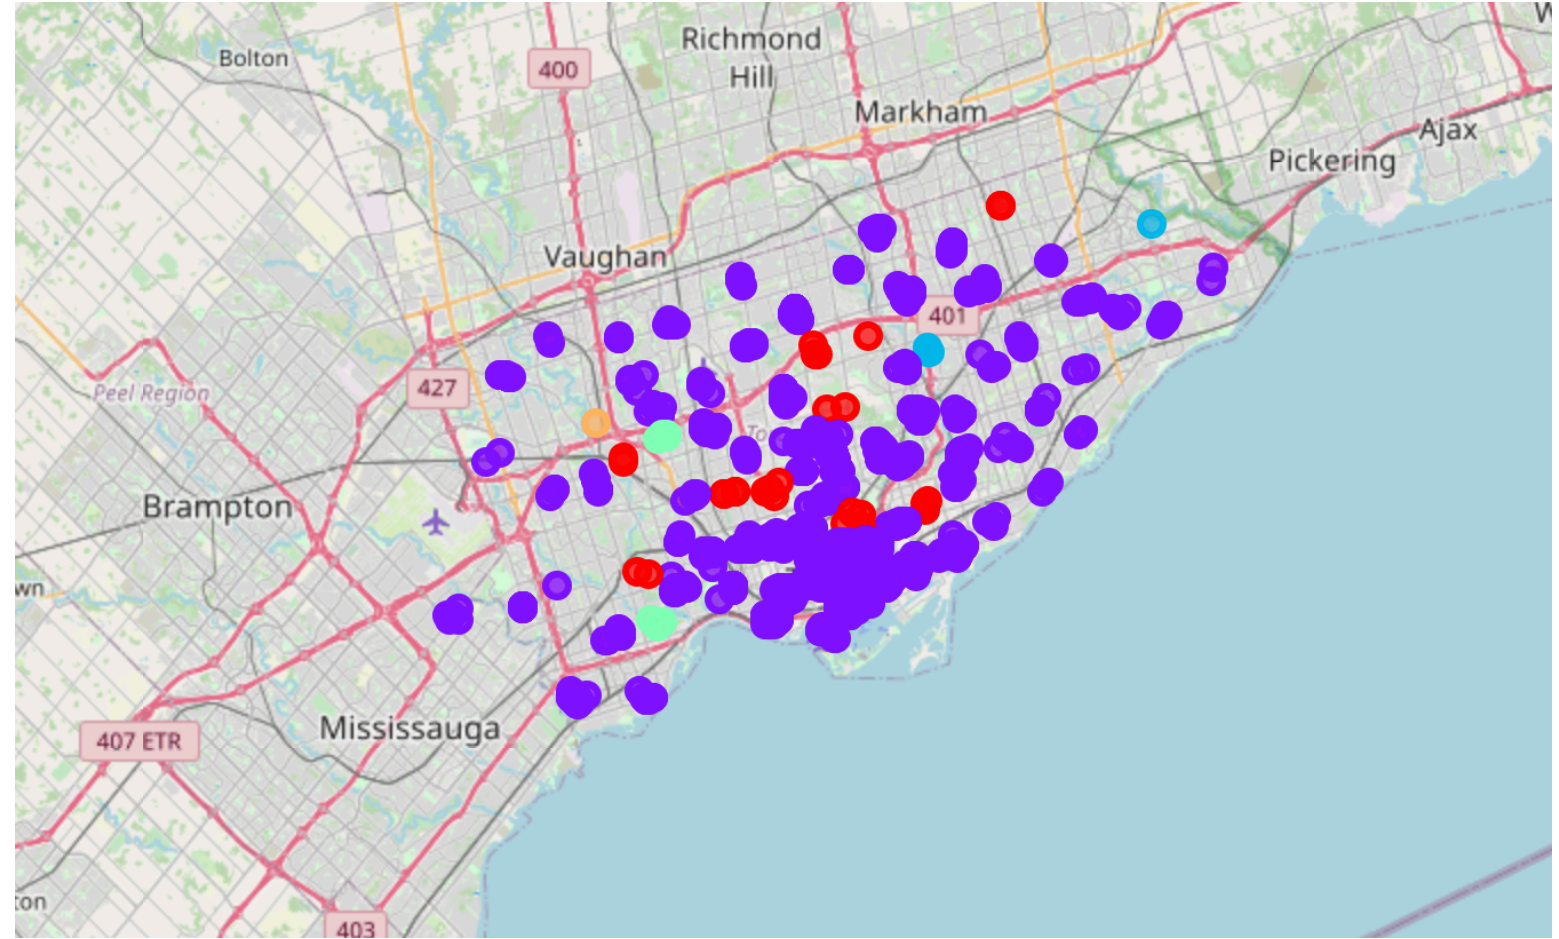

Toronto Category Plot

Lisbon Cluster

Toronto Cluster

Results

- Group the neighborhoods of each city into one table
- Define clusters (5) using K-means to see the similarity or dissimilarly
- Final ouput using a plot Bar

Final Cluster Plot

Conclusions

- Each city differs from each others
- Only 1 cluster in common for both cities
- The 4 remains clusters only occurs in Toronto
- The one which combines both cities contains the highest number of neighborhoods in Toronto
